Abstract: Results of the International Projects of the CESA on the Lepidoptera of the World- I. *Cent. ent. Stud., Memoirs* 3-4: v+1-1989pp., 49 Col. Plates.

The first results of the twentyfour major scientific projects of the Centre for Entomological Studies Ankara (CESA) are presented. The Scientific research activities of the CESA are compiled under the following Project titles: (1) Diversity of the Lepidoptera in the World (DLW); (2) Researches on the animal- plant interaction: Foodplants of the Lepidoptera (FL); (3) Bibliography of the Lepidoptera (BL); Secondary Projects of the CESA: I- Faunas of Actual States: (4) Lepidoptera of Turkey (LTR); (5) Lepidoptera of the Philippines (LPH); (6) Lepidoptera of Thailand (LTH); (7) Lepidoptera of South Africa (LZA); (8) Lepidoptera of Uighur Ili (LUI); (9) Lepidoptera of Iran (LIR); (10) Lepidoptera of Ethiopia (LET); (11) Lepidoptera of Middle East (LME); (12) Lepidoptera of Indo-China (LIC); (13) Lepidoptera of Africa (LAF); (14) Lepidoptera of Orientalic Region (LOR); (15) Lepidoptera of Asia (LAS); (16) Lepidoptera of Old World (LOW); II- Faunas of Historical States: (17) Lepidoptera of Urartu (LUR); (18) Lepidoptera of Uighur State (LUI); (19) Lepidoptera of Gazne State (LGZ); (20) Lepidoptera of Seljuk State (LSE); (21) Lepidoptera of Cenghiz Khan Emperor (LCE); (22) Lepidoptera of Timur Emperor (LTI); (23) Lepidoptera of Eretna Sultanate (LER); (24) Lepidoptera of Ottoman Emperor (LOT).

The first part of the results of the projects are published by various authors in the third and fourth volumes of the Cesa's serial *Memoirs*. Aim and scopes of the projects are explained in the Chapter 1 "Introduction". Some other foreign projects on the similar subjects are compared and discussed briefly. The project, The Diversity of the Lepidoptera of the World (DLW) is introduced. The results of the project "The Diversity of the Lepidoptera in the World (DLW)" are given in the Chapter 2 as synonymous list of the valid genus-group names (8251 valid taxa) and in the Chapter 3 as synonymous list species-group names (82189 valid taxa), in accordance with the current ICZN Rules. The temporary results of the project "Bibliography of the Lepidoptera (BL)" are given as the list of the publication used in the Cesa's projects (7500 publications) in the Chapter 4. The original references to the genus- and species group names in the Lepidoptera have been preparing by the author within the project "BL". Temporary result for more than 14500 taxa is published in Chapter 5 with their original references. Some results of the following projects are also mentioned and discussed under the following chapters: In Chapter 6, results of the animal - plant interaction: Food-Plants of the Lepidoptera (FL) (for 3950 lepidopterous taxa); In Chapter 7, one of the results of the Projects, Faunas of Actual States, is published entitled "Illustrated list of the Lepidoptera recorded in the Transvaal (South Africa) (LZA)" (2125 species); In Chapter 8, one of the results of the Projects, Faunas of Actual States, is published entitled "Illustrated list of the Lepidoptera recorded in Uighur Ili (LUI)" (1271 species); In Chapter 9, one of the results of the Projects, Faunas of Actual States, is published entitled "List of the Lepidoptera recorded in Iraq (LAS)" (1184 species); In Chapter 10, one of the results of the Projects, Faunas of Actual States, is published entitled "List of the Lepidoptera recorded in Doi Inthanon (North Thailand) (LTH)" (438 species); In Chapter 11, one of the results of the Projects, Faunas of Actual States, is published entitled "Illustrated list of the Lepidoptera recorded in Chiang Dao (North Thailand)" (LTH) (618 species); In Chapter 12, one of the results of the Projects, Faunas of Actual States, is published entitled "Illustrated list of the Lepidoptera recorded in Chiang Mai University Campus (North Thailand) (LTH)" (328 species); In Chapter 13, one of the results of the Projects, Faunas of Actual States, is published entitled "List of the Lepidoptera recorded in Afghanistan (LAS)" (1599 species); In Chapter 14, one of the results of the Projects, Faunas of Actual States, is published entitled "Illustrated list of the Lepidoptera recorded in Iran (LIR)" (3295 species); In Chapter 15, one of the results of the Projects, Faunas of Actual States, is published entitled "List of the Lepidoptera recorded in the Philippines (LPH)" (2337 species), and in Chapter 16, one of the results of the Projects, Faunas of Historical States, is published entitled "Lepidoptera of Eretna Sultanate in Asia Minor (LER)" (4067 species or subspecies).

About the Cesa Projects

In the internet site <<http://www.cesa-tr.org/Cesaprojects.htm>>, information of the “*Projects of the CESA*”¹ has been continuously announcing. The last updated information on 24th July, 2006 as follows;

Projects of the CESA

Diversity of the Lepidoptera in the World (DLW)

by

Ahmet Ömer Koçak & Muhabbet Kemal Koçak

DLW is an independent project supported by the Cesa from the year of **1998** on. The aim of this project is preparing a comprehensive database program on especially Old World Lepidoptera taxa for the scientific surveys of the Cesa researchers. It comprises, at present, **50205** valid species, as well as **20881** subspecies in **7265** valid genera, subgenera or sections (**See**), and **912** family group names among the **79278** taxa (**Table 1**). Original references, synonyms, vernacular names, distributional information of **5460** localities, provinces or states in the world (**See**); important ecological information (food-plants, habitats, phenology, generations, etc), bibliography, etc. are also included. All the states, regions, provinces, and collecting localities were given as codes for the researches carried out by the Cesa (**Codelist**). Taxonomical evaluations of the authors are also made in the Cesa's program for the first time in the world, using the DLW program (**See**). Complementarily, thousands original digital images taken in nature, original distributional maps of the taxa are also available in the Cesa archives.

All the scientific activities within the projects cited above have been carrying out by Ahmet Ömer Koçak and Muhabbet Kemal Koçak. Their scientific responsibilities have been already explained in the following internet site: <<http://www.cesa-tr.org/Organ.htm>>. In the present reports some Chapters have been published by three authors, namely Ahmet Ö. Koçak, Muhabbet Kemal and Selma Seven.

Diversity of the Lepidoptera in the World (DLW)

This is an independent project supported by the Cesa from the year of 1998 on. The aim of this project is preparing a comprehensive database program on especially Old World Lepidoptera taxa for the scientific surveys of the Cesa researchers. Although it has been announced for the last time that the total number of the valid taxa is 79278 (see above), the total number increased for today [9 December, 2007] to 92870. The names of the taxa within the Database program of the Cesa have been checking up continuously. In spite of this, there are still many names should be corrected (see also editorial notes below).

DLW project is not only based upon the published information of the Lepidoptera taxonomy, fauna and ecology, but also upon the field experiences of the authors in the 22 states in the Old World so far. In the last updated Database Program of the Cesa, more than 87000 information fields have been filled by the first author in the 10 years. Within the next 10 years, it is hoped that this number may increase to 160000 valid taxa (including genus- and species group names). In average each valid taxa has in average 5 invalid synonym or homonym names. The latters have been excluded during the calculation of the mentioned total numbers.

A complementary program of the DLW is the “Code List” prepared by the author for the localities, territories, provinces and states of the World. Totally 5717 geographical sites have been specially coded, where the Lepidoptera species have been recorded. The list of the code has been currently placed in our Internet Site: <<http://www.members.tripod.com/Cesa88/Code.pdf>>

Technical Information

DLW is based upon the database program arranged by the first author in FoxPro 2.5 and 2.6 (DOS & WINDOWS) Versions. Previous database files on the same subject prepared in DBase Super Plus III have been adopted to FoxPro. First attempt in preparing such a program was made by the author in 1987. At that time, the faunal information on the Palaearctic Lepidoptera has been typed into several faunal.dbf by the author himself. More than 100000 information fields have been filled so far.

In 1998 the present DLW files has been prepared at first for the West Asiatic countries. Later, the covering area has been expanded to the Old World states. At present, it is also interested in Neotropical Region as well to some degree.

As already mentioned above, the valid taxa, placed in this program, is over 92800. For each taxon the following major information fields are used: Family, classification code, categories [family, genus, species, subspecies], valid taxon name [name combination author and date of publication], synonyms [arranged chronologically], type of scientific name, type locality, vernacular names [English, Turkish, Uighurian], range [states, countries, regions, and collecting localities are given as codes (see list of the codes)], flight activities, basking, drinking, hill-topping, patrolling behaviour of the butterflies, migration, presence, oviposition, pupation, hibernation, endemism, distribution type, pest and references, parasites, predators, feeding types, phagism, baits for collecting, fruit-piercing and zoophilous species, larval food-plants, adult food-plants, habitats, habitat types, threatened species, cytological information, phenology, and vertical distribution.

The scientific sources for this program are found in Cesa's Library. Information of the significant collection of the Lepidoptera (more than 200.000 specimens), as well as the photo and video archives of the Cesa are widely used for this purpose.

Temporary results of the project DLW are presented in the Chapter 4.

Researches on the animal- plant interaction: Foodplants of the Lepidoptera (FL)

Information on the Lepidoptera – Plant Interactions has been announced by the authors in the following Internet site <<http://www.cesa-tr.org/Lepplant.htm>>. Last update of that page is 16th July 2006. According to the page, larval food plant known species in the database of the Cesa was 3320. At the present time, this number increased to 4107 [stand 14 March, 2007]. These species are listed in the Chapter 6. Original Illustrations of some food-plants and early stages of some Lepidoptera are also added.

Bibliography of the Lepidoptera (BL)

Information on the Bibliography of the Lepidoptera (BL) been announced by the authors in the following Internetsite <<http://www.anzwers.org/free/cesa/Lib.htm>> or <<http://www.cesa-tr.org/Lib.htm>> Last update of that page is 15th September 2006. Within the site "Library and the Databank" totally 7375 publications have been announced. At present the recorded number increased to 7500. The estimated number of the publications in the Cesa Library is more than 15000. Data have been typing by the author. Separately, original references to the genus- and species group names of the Lepidoptera have been preparing by the author. More than 14500 references prepared and listed in the Chapters 4 and 5.

Secondary Projects of the CESA

Under this title totally 21 major faunal projects have been organized by the Cesa. They have been divided into two groups: I- Faunas of Actual States, and II- Faunas of Historical States.

I- Major Projects on the Faunas of Actual States: Lepidoptera of Turkey (LTR)², Lepidoptera of the Philippines (LPH)³, Lepidoptera of Thailand (LTH)⁴, Lepidoptera of South Africa (LZA)⁵, Lepidoptera of Uighur Ili (LUI)⁶, Lepidoptera of Iran (LIR)⁷, Lepidoptera of Ethiopia (LET), Lepidoptera of Middle East (LME), Lepidoptera of Indo-China (LIC)⁸, Lepidoptera of Africa (LAF), Lepidoptera of Orientalic Region (LOR), Lepidoptera of Asia (LAS)⁹, Lepidoptera of Old World (LOW)¹⁰

All these projects are based on the published information and field Works of the authors. There is no dead-line in completing these projects. In the following chapters of this publication, some intermediate results of these projects are submitted: The selected titles are as follows; List of the Lepidoptera recorded in Afghanistan (LAS)¹¹; Illustrated list of the Lepidoptera recorded in Artvin Province (North East Turkey) (LTR); Illustrated list of the Lepidoptera recorded in Balıkesir Province (North West Turkey) (LTR); Illustrated list of the Lepidoptera recorded in Tunceli Province (East Turkey) (LTR); Illustrated list of the Lepidoptera recorded in Van Province (East Turkey)¹² (LTR); Illustrated list of the Lepidoptera recorded in Istanbul Province (North West Turkey) (LTR); Illustrated list of the Lepidoptera recorded in Mersin Province (South Turkey) (LTR); Illustrated list of the Lepidoptera recorded in Iran (LIR); List of the Lepidoptera recorded in Iraq (LAS); Illustrated list of the Lepidoptera recorded in the Transvaal (South Africa) (LZA); Illustrated list of the Lepidoptera recorded in Uighur Ili (LUI); Illustrated list of the Lepidoptera recorded in Chiang Mai University Campus (North Thailand) (LTH); Illustrated list of the Lepidoptera recorded in Doi Inthanon (North Thailand) (LTH); Illustrated list of the Lepidoptera recorded in Chiang Dao (North Thailand) (LTH); Illustrated list of the Lepidoptera recorded in the Philippines (LPH).

II- Faunas of Historical States: Lepidoptera of Urartu (LUR), Lepidoptera of Uighur State (LUI), Lepidoptera of Gazne State (LGZ), Lepidoptera of Seljuk State (LSE), Lepidoptera of Cenghiz Khan Emperor (LCE), Lepidoptera of Timur Emperor (LTI), Lepidoptera of Eretna Sultanate (LER)¹³, Lepidoptera of Ottoman Emperor (LOT)

This is another incomparable Project groups of the Cesa. The taxonomical and faunistical studies have been conducting by the scientists in the World within nearly two centuries. The authors of such studies dedicate frequently the scientific names of the new taxa to the actual states, territories, or to their collaborating friends. Rarely, some authors interested very much in the history; therefore they prefer dedicating the new scientific names to the historical states, territories, or important personalities. We have also special interest in this subject. Selected examples about the historical scientific names of the Lepidoptera downloaded from the database of the Cesa are listed below:

Nemophora **eretna** Kemal & Koçak, 2006 (Adelidae)
Callimorpha dominula **persica** Le Cerf, 1913 (Arctiidae)
Epatolmis **caesarea** (Goeze, 1781) (Arctiidae)
Nebractia **semiramis** (Staudinger, 1892) (Arctiidae)
Cymothoe **reginaelisabethae** Holland, 1920 (Argynnididae)
Euphydryas (Eurodryas) desfontainii **baetica** (Rambur, 1858) (Argynnididae)

² Total number of the species recorded in the Database of the Cesa is 5062.

³ Total number of the species recorded in the Database of the Cesa is 2344. See also Chapter 15.

⁴ Total number of the species recorded in the Database of the Cesa is 4284.

⁵ Total number of the species recorded in the Database of the Cesa is 7510 in South Africa only. Separately, number of the species of Transvaal in 2125. See also Chapter 7.

⁶ Total number of the species recorded in the Database of the Cesa is 1271. See also Chapter 8.

⁷ Total number of the species recorded in the Database of the Cesa is 3295. See also Chapter 14.

Editorial

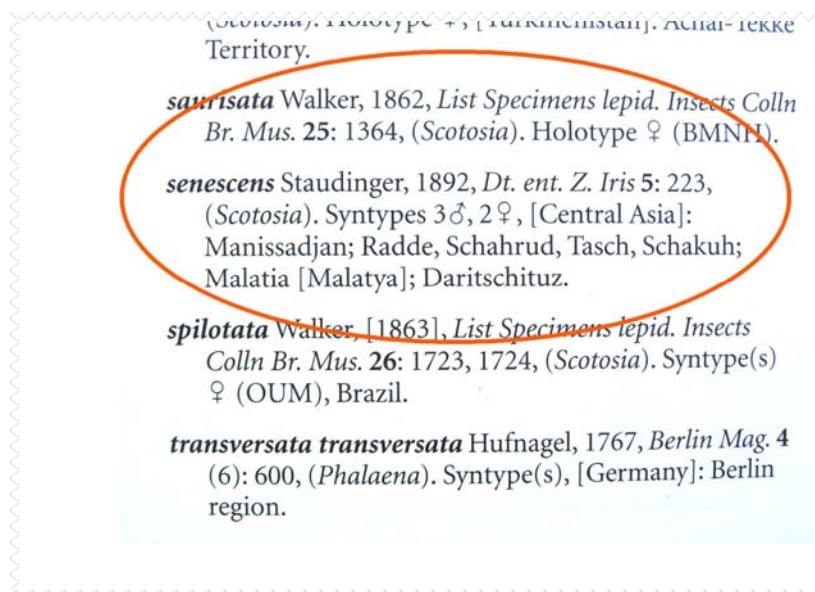

Mistakes in every enormous study may appear. This case should be considered by the scientists reasonable. Constructive criticisms are always welcomed.

Some time ago, I have been severely criticized by some British lepidopterists due to my some scientific activities. For that reason, and in order to prevent some destructive approaches to us, I feel myself responsible to explain some realities about the incompleteness or errors in taxonomy or in other subjects, existing in some well known studies of the western scientists. Some selected documents are mentioned below (Documents 1-20)¹⁴:

Document 2 – In this example Manissadjan [Staudinger's collector] has been treated as a geographical region and explained as if it were in Central Asia! Moreover, Malatia has been corrected as Malatya but considered as a place in Central Asia, not in Turkey! (Scoble, 1999).

Document 3 – In this example Kasikoparan has been treated as a geographical place in Armenian territories not in North East Turkey! (Scoble, 1999).

Document 17 – In this example another information card “crocalis” of the British Museum has been illustrated for the use of the scientist in the Internetsite of the Global Lepidoptera Names Index last updated by G.W.Beccaloni in 11/04/2003. The specific name “crocalis Hampson” has been attributed erroneously to the genus name “Phlyctaenodes” (see card above).

Document 18 – In the previous document (17) date of publication was omitted by Beccaloni. This document shows that the unknown date of publication of crocalis is “1891” (ex Cesa Library) (see also card above).

Document 19 – In the previous document (17) original genus name of the species *crocalis* has been indicated by Beccaloni as “Phlyctaenodes” (see card above). This document is a copy of the original reference of the species *crocalis* Hampson. Original genus name of the species *crocalis* can be easily seen as “Opsibotys” not “Phlyctaenodes”, claimed by British Museum! (ex Cesa Library)

Document 20 – In the previous document (17) original genus name of the species *crocalis* has been indicated by Beccaloni as “Phlyctaenodes” (see card above). This document is a copy of the plate of the original reference of the species *crocalis* Hampson. Original genus name of the species *crocalis* can be easily seen as “Opsibotys” also in the Plate 154 fig. 7, not “Phlyctaenodes”, claimed by British Museum! (ex Cesa Library).

The documents numbered 1-5 and 7-9 are on the incorrect geographical information of type localities of some Geometrid moths published by the Natural History Museum, London in 1999 (for more information see footnote). It is very easy to see the information underlined in the related documents are wholly baseless; therefore they cannot be universalized. We abstain from giving detailed comment about them.

In the document 10, presenting the synonymic list of the names has been exemplified. Synonymous names are currently presented in chronological order. We find this application very useful as we would like to see the historical

information of the taxon. We believe that arranging the synonymous names in alphabetical order is due to lacking some technical information during the preparing the Database Programs. This case has also some other disadvantages when preparing the index of the names cf. Scoble, 1999.

The documents 11-13 shows the unnecessary synonyms proposed by the prominent scientists for a single taxon. This case is very frequently seen in the Lepidopterozoology. In the document 11 and 12, Walker proposed 7 different names for a single taxon. In the document 13, Moore proposed 37 different generic names for a single taxon. This case brings a great confusion only to the science. A special program by the Cesa for determining the success of the taxonomists will be explained and discussed below.

The documents 14-16 are the information cards of the British Museum, upon which the well known database program "The Global Lepidoptera Name Index" based. Those cards unfortunately have no sufficient information, although they were updated by the authorities of the British Museum. Moreover, this case is not rare in this database program. On the other hand, a special case is related with the date of publication of "crocalis Hampson" and the original combination of it. In the British Museum card, given in the Document 17, date of publication is unknown according to G.W.Beccaloni (updated in 11/4/2003). In the card, it is clearly seen that the pyralid species crocalis described by Hampson as a species of Phlyctaenodes (confirmed by G.W.Beccaloni in 11/4/2003). Now let us look at the Hampson's publication front cover (Document 18), in which crocalis published. Date of publication "1891" may be easily seen at the bottom, although it has been ignored by the authorities of the database. As to the original combination of the species crocalis Hampson, in the Document 19, this combination is composed of the names Opsibotys and crocalis, not Phlyctaenodes crocalis as in the published British Museum information card. In the related plate 154, the figure 7 denotes Opsibotys crocalis Hampson once again, not Phlyctaenodes crocalis!

"The Global Lepidoptera Name Index" must be the most reliable database program in the World. We take it into consideration seriously.

Evaluation of the Taxonomists¹⁵

In order to determine the success of the taxonomists, a special program has been developed and applied by the Cesa. This incomparable program in the World has been announced in the following internet Site: <<http://www.anzwers.org/free/cesa/tet.htm>>. In 16 July 2006 updated page is presented below by downloading from the internet Site.

"This program is still under preparation. The temporary results, based on the databank of the CESA, are given in the table. Among more than 900 authors results of the 20 prominent authors from various countries are given below as demonstration. The valid and the synonymous names of the authors mentioned below are compiled from the current taxonomical publications of various authors".

Table 1: Taxonomic evaluation for 20 authors: A. number of the proposed generic names, B. number of the generic names in the synonymy. C. number of the proposed specific names, D. number of the specific names in the synonymy. E. number of the proposed subspecific names, F. number of the subspecific names in the synonymy. In some publication various indelicate claims may be seen about some authors, if failure of success appears in proposing a new taxon. We regret very much about this situation. Every scientists should be well-mannered to every scientific attempt. It should not be forgotten that mistake belongs to mankind. If the examples, presented in the Tables (1-4), are examined accurately, it will be seen that there is no faultless taxonomists in the World. Perhaps only the Cesa has a living project on this subject in the World, with an vast information on more than 900 lepidopterists.

In the Table 1, the first results on this subject have been announced in our Internet Site. Together with the 20 authors, also Hampson's taxa have been evaluated in that Table. Hampson's success in proposing the genus group taxa, is 77,83 %, based upon his 582 genus group names. Among them, 129 are currently considered by the taxonomists as invalid. Hampson's success in proposing the species taxa, is 86,23 %, based upon his 3095 species names. Among them, 426 are currently considered by the taxonomists as invalid. Hampson's success in proposing the taxa at all level, is 84,86%, based upon his 3840 taxa names. Among them, 581 are currently considered by the taxonomists as invalid. Now, let us compare these rates with the information of today. When we examine the numbers in the Table 2, we may see Hampson's rates as follows; rate of successes [1] in generic names is 77,18% (based upon 653 names), [2] in species is 85,43% (based upon 3728 names), [3] in all taxa is 84,22% (based upon 4558 names). Differences of the rates are found by us insignificant (77,83 % → 77,18%; 86,23 %→85,43%, and 84,86% →84,22%). The results are scientific and we never use these results in doing someone injustice. The only reasonable evaluation should be made in the following way: "*Moore is more successful lepidopterist than Butler, or Walker*". And we demand rightfully from all other lepidopterists the same attitude to us, what we would like to do.

Table 2: Present taxonomic evaluation for 20 authors: A. number of the proposed generic names, B. number of the generic names in the synonymy. C. number of the proposed specific names, D. number of the specific names in the synonymy. E. number of the proposed subspecific names, F. number of the subspecific names in the synonymy. G. number of the proposed total names, H. number of the total names in the synonymy. % **rate of the success**. [stand 16 February 2007] Direction of the arrows (↓ or ↑) indicates that the rates of success of all names of the authors decrease or increase comparing with the previous Table.

Abstract: Chapter 2: Valid Genus Group Names (Genera, Subgenera, and Sections) recorded in the Databank of the CESA [in] Koçak,A.Ö. & M.Kemal, Results of the International Projects of the CESA on the Lepidoptera of the World- I. *Cent. ent. Stud., Memoirs* 3-4: 23-142. The partial results of the project "The Diversity of the Lepidoptera in the World (DLW)" are given in this Chapter as synonymous list of the valid genus-group names. Some brief explanations concerning generic checklist are given. Totally 8251 taxa are listed alphabetically under the related families. Synonymous names are given in chronological order.

Abstract: Chapter 3: Valid Species Group Names (Species and Subspecies) recorded in the Databank of the CESA [in] Koçak,A.Ö. & M.Kemal, Results of the International Projects of the CESA on the Lepidoptera of the World- I. *Cent. ent. Stud., Memoirs* 3-4: 143-1116, Pls 1-16. The partial results of the project "The Diversity of the Lepidoptera in the World (DLW)" are given in this Chapter as synonymous list of the valid species-group names. Totally 82189 taxa [stand 1 May 2007] are listed alphabetically under the related families. Synonymous names are given in chronological order.
